ARCHITECTURE · NURU V2 PROTOTYPE

How NURU Works

NURU is a personal AI assistant for Tanzanian government officials: it listens in English or Swahili, operates government systems on screen where you can watch, and asks before anything consequential.

HOW TO READ THIS Left to right: what runs on your device, what runs on the NURU backend, and the outside services it calls. Hover to highlight; click any box or arrow for details.

Legend Your device · NURU backend · External · Request / response · Server push · External AI service · Inside the page

TEST COPY mock-up with fictional people · REAL SYSTEM · Database (example tables) · Trust view: data leaving the machine; shields = safeguards
